Stolar Research Corporation has been selected as an award recipient of the Flying 40 for 2007. This will be the 9th consecutive year Stolar has received this award. This is an award that recognizes the industry's leading technology companies in New Mexico. There is a special "Flying 40" section to be published in the Albuquerque Journal's Business Outlook on Jun. 28, 2007. The Flying 40 is a list of the largest and fastest growing technology employers in New Mexico. The companies are ranked according to current revenues and percentage growth in revenues. This will be the 10th year of the Flying 40 Awards. The Albuquerque Journal's Business Outlook, along with Technology Ventures Corporation, KPMG LLP, and New Mexico Bank &

Trust, co-sponsors the annual awards program. There are three categories: companies with revenues under \$20 million, companies with revenues between \$10 million and \$20 million and companies with revenues under \$10 million. All of the companies will be recognized at a luncheon on Jun. 26, 2007 at the Embassy Suites Hotel in Albuquerque.

Stolar is an advanced radio geophysics company. Always at the forefront of radio imaging, the research and development company develops and manufactures unique proprietary products to solve problems for the commercial energy industry and the U.S. military. These solutions use electromagnetic radio waves to penetrate the earth, detecting and imaging underground geologic formations and structures and enabling in-mine wireless tracking and communications.
